Application/Control Number: 10/616,332

Art Unit: 2874

## Reasons For Allowance

None of the references disclose alone or in combination an integrated circuit couplable to a semiconductor laser and to a photodetector laser capable of transmitting an optical signal in response to a modulation current and the photodetector capable of converting the optical signal into a photodetector current, the integrated circuit comprising a modulator coupable to the semiconductor laser and an extinction ratio controller coupable to the photodetector and coupled to the modulator, the extinction ratio controller, in response to the photodetector current, capable of adjusting the modulation current provided by the modulator to the semiconductor laser to generate the optical signal having substantially a predetermined extinction ratio.
